

MICRONEEDLING

for the face

Microneedling is a safe, effective and minimally-invasive procedure that consists of applying microneedles to the skin, creating a series of tiny punctures (micro-wounds). This triggers your body's wound healing processes, resulting in a stimulated collagen production to heal these micro wounds.

Microneedling can improve acne scarring, fine lines and wrinkles, skin texture, pore size, hyperpigmentation, and loose skin, with the benefits of glowing, smoother, and younger looking skin.

A minimum of 6-8 treatments is advised for maximum benefits. This treatment may be scheduled every 30 days.

Added to any other Microneedling treatment
\$100

MICRONEEDLING

for the scalp

Microneedling is a safe, effective and minimally-invasive procedure that consists of applying microneedles to the skin, creating a series of tiny punctures (micro-wounds). This triggers your body's wound healing processes, resulting in a stimulated collagen production to heal these micro wounds.

Collagen is essential for the health of your hair, the scalp loses collagen with age, which results in slow hair growth and dormant hair follicles.

Microneedling brings blood flow and nutrients to the scalp and induces new stem cells that support hair growth.

Those with psoriasis of the scalp, seborrheic dermatitis, or other scalp conditions should consult a dermatologist before treatment.

This treatment may be scheduled every 30 - 40 days.

Scalp

\$200+

(depending on size of area to be treated)

MICRONEEDLING

contraindications

- Active skin cancer
- Pustular or nodular Rosacea or Acne
- Keloid history (especially palms and soles of feet)
- Eczema
- Psoriasis
- Raised moles or warts
- Active HSV infection
- Scars less than 6 months old
- Pregnancy (due to vitamin A topicals, Lidocaine)
- Any active bacterial or fungal infection
- Atopy or Urticaria history
- Immunosuppressed patients
- Diabetes

TOPICALS TO AVOID

- Artificial colors
- Artificial perfumes (fragrance)
- Preservatives (Parabens, Benzyl Alcohol)
- Alpha-Hydroxy Acids, Salicylic Acid
- Emollients (occlude the skin to retain moisture)
- Propylene or Ethylene Glycol
- Surfactants (Sodium Laureth Sulfate, Benzalkonium Chloride)
- Emulsifiers (Polyethylene Glycol, Cetyl Alcohol)
